Personal Projects

Mapd, Chrome Extension
- A google chrome extension that takes a user inputted address and opens a google maps of that location.
- Currently still being worked on, to improve UI and functionality
- This was built using JavaScript, HTML and JSON. Current Release is: 1.0

redditHelpers, Python Scripts
- A collection of simple python scripts to make browsing reddit quicker and more convenient.
- Currently one of the scripts has a few bugs due to server unreliability and reddit code inconsistency, this is being looked into.
